We report the consensus genome sequence of a novel GC-rich rudivirus, designated SMR1 (Sulfolobales Mexican rudivirus 1), assembled from a high-throughput sequenced environmental sample from a hot spring in Los Azufres National Park in western Mexico.

Received 12 October 2012 Accepted 29 October 2012 Published 15 January 2013

Acknowledgments

The UUSM from UNAM is thanked for sample sequencing. The Comisión Federal de Electricidad personnel provided a permit for samplings. We thank professor Jesús Campos Garcia from the UMSNH for providing laboratory facilities. The samplings were carried out with the efforts of Hans Román, Jonathan Lopez, José Luis Servín, and Cecilia Garcidueñas.

The research was supported by PAPIIT IN205412 from DGAPA, UNAM and SUBNARGEM, SAGARPA. L.E.S.G. received a PhD scholarship from CONACYT (Mexico) under the Programa de Doctorado en Ciencias Biomédicas from UNAM. L.E.S.G. had a “Beca Mixta” from CONACYT and a fellowship from PAEP during a research internship at the Danish Archaea Center.
