*Vibrio anguillarum* phage CHOED was isolated from Chilean mussels. It is a virulent phage showing effective inhibition of *V. anguillarum*. CHOED has potential in phage therapy, because it can protect fish from vibriosis in fish farms. Here, we announce the completely sequenced genome of *V. anguillarum* phage CHOED.

**Nucleotide sequence accession number.** The complete sequence of the *V. anguillarum* phage CHOED genome can be accessed under the GenBank accession no. KJ192399.

**ACKNOWLEDGMENTS**  
This project was funded by grants Fondecyt 1140734 and Fondecyt 1110253 from CONICYT and assisted by Cooperation International Grant Marie Curie (IRSES-2010, FP7.N269175), AQUAPHAGE, Network for the development of phage therapy in aquaculture.
