Obscuroplaca gen. nov. – a replacement name for Phaeoplaca; Teloschistaceae (lichenized Ascomycota) from the Galapagos Islands

Frank Bungartz1,2,3*, Ulrik Søchting4 & Ulf Arup5

Abstract. A replacement name Obscuroplaca for the illegitimate genus Phaeoplaca is introduced. The three known species are transferred as Obscuroplaca camptidia, O. ochrolechioides, and O. tortuca.

Key words: Caloplacoideae, Chrysophyceae, Golden Algae

Introduction

We recently introduced the name Phaeoplaca Sochting et al., as a new genus in Teloschistaceae (Bungartz et al. 2020). At the time of publication, we were not aware that Chodat et al. (1926) had first proposed an identical name for a genus of freshwater algae in the Chrysophyceae Pascher. The International Code of Nomenclature for algae, fungi, and plants (Turland et al. 2018) applies to fungi and algae. The name of each taxonomic group governed by the code has to be unique. Therefore, the name Phaeoplaca is an illegitimate later homonym of Chodat’s name.

To remedy the situation, we introduce Obscuroplaca as a replacement name here.

Obscuroplaca Sochting, Arup & Bungartz, nom. nov.

MycoBank MB 841162

Type: Obscuroplaca camptidia (Tuck.) Sochting et al. (syn. Lecanora camptidia Tuck.).

Etymology: This replacement name is a combination of the syllables ‘-placa’ hinting at Caloplaca (from which species in the genus were transferred), and the Latin ‘-obscuro’ meaning ‘dark’, referring to the overall dull color of thallus and apothecia, both lacking the typically bright anthraquinones of most other members of the Teloschistaceae.

The following three species were previously included in the genus and are all transferred here into Obscuroplaca.

Obscuroplaca camptidia (Tuck.) Sochting, Arup & Bungartz, comb. nov.

MycoBank MB 841165

Obscuroplaca ochrolechioides (S.Y. Kondr. & Kärnefelt) Sochting & Bungartz, nom. nov.

MycoBank MB 841164

Obscuroplaca tortuca (Søchting & Bungartz) Søchting & Bungartz, comb. nov.

MycoBank MB 841163

Acknowledgements

We are indebted to James K. Mitchell at Harvard University for notifying us that the name Phaeoplaca had previously been published by Chodat, alerting us to the necessity to propose a replacement name. We also appreciate the support of Konstanze Bensch, Mycobank, in providing guidance to register Obscuroplaca as a replacement name. Robert Lücking and an anonymous reviewer provided constructive criticism on how to improve this short manuscript, which we greatly appreciate. And we are indebted to Adam Flakus and Jolanta Miadlikowska, editors of this journal, for facilitating this publication as a short communication. This publication is contribution number 2416 of the Charles Darwin Foundation for the Galapagos Islands.
